Subject: Quick question about your work on domestication and cognition

Hi Per,

I came across your review "Are domesticated animals dumber than their wild relatives?", and the comparative angle you and your group take on domestication and cognition is very close to the behavioural-flexibility questions I work on.

I'm Adonai Gil, a contracted research assistant in the Animal Minds lab at the Universitat Autònoma de Barcelona (UAB), under Alex Taylor. For my master's thesis, on decision-making in a two-alternative task, I combined hierarchical Bayesian models in R (brms, bayestestR, tidybayes, bayesplot, emmeans) with GLM-HMM latent-state analysis to characterise the animal's strategies, validated behaviourally; I also trained several DeepLabCut models and built a post-processing pipeline for coordinate tracking and optical distortion correction.

Would you be open to a brief 15-20 minute call to talk about whether there's scope to collaborate, or to join your group in some capacity? I'm not assuming a position is open — just keen to hear how you see the fit, if any. Happy to work around your schedule so this costs you as little time as possible.

I know this may not match anything you have open right now, and that's completely understandable.

Best regards,

Adonai Gil
