Email draft

Language: English (copy & send yourself)

Subject: Company of Biologists Travelling Fellowship — checklist + draft text

CHECKLIST — verify before applying:

- [BLANK: host lab / collaborator and institution] — this fellowship funds a collaborative lab visit; no host has been identified yet.
- [BLANK: specific technique or exchange you'd pursue at the host lab.]
- Deadline is rolling / journal-specific — confirm the current submission window on [biologists.com](https://www.biologists.com).
- Journal of Experimental Biology (JEB) is flagged as the best-fit journal for this scheme — confirm the application should route through JEB rather than another Company of Biologists journal.

--- (a) Enquiry email — send once a host/collaborator is identified ---

Subject: Enquiry — Company of Biologists Travelling Fellowship, collaborative lab visit

Dear [BLANK: host name],

My name is Adonai Gil, and I am a research assistant in the Animal Minds lab at the Universitat Autònoma de Barcelona (UAB), led by Alex Taylor. I am writing to ask whether you would be open to hosting a short collaborative visit, to be supported by a Company of Biologists Travelling Fellowship (via Journal of Experimental Biology), so that I could [BLANK: specific exchange or technique].

In my own work I use hierarchical Bayesian models in R (brms, bayestestR, tidybayes, bayesplot, emmeans) alongside GLM-HMM latent-state analysis to characterise behavioural strategies, and I have trained DeepLabCut models and built a coordinate/optical-distortion post-processing pipeline for tracking data.

If this is of interest, I'd be glad to have a brief call to discuss fit before I put an application together — I would handle the grant application myself.

Best regards,

Adonai Gil

--- (b) Draft application framing text ---

I am a research assistant in the Animal Minds lab at the Universitat Autònoma de Barcelona (UAB, PI: Alex Taylor). My master's thesis, on decision-making in a two-alternative task, combined hierarchical Bayesian models in R (brms, bayestestR, tidybayes, bayesplot, emmeans) with GLM-HMM latent-state analysis to

characterise the animal's strategies, validated behaviourally; I also trained several DeepLabCut models and built a post-processing pipeline for coordinate tracking and optical-distortion correction.

[BLANK: state the specific collaborative visit you're proposing, why the host lab is the right fit, and how it extends your current pipeline.]

This visit would feed directly into my ongoing work at UAB and my plan to pursue a funded PhD from around September next year.
