

EMBO Scientific Exchange Grants

grant · tier: international ·

<https://www.embo.org/funding/fellowships-grants-and-career-support/scientific-exchange-grants/>

Flags

- Eligibility: Funds research visits up to 3 months to another lab to learn techniques. Good fit for a short methods exchange (e.g. modelling collaboration).

Email draft

Language: English (copy & send yourself)

Subject: EMBO Scientific Exchange Grant — checklist + draft text

CHECKLIST — verify before applying:

- [BLANK: host lab / PI and institution] — this grant funds a visit to a specific lab, and no host has been identified yet. Nothing below can be finalised until one is chosen.
- [BLANK: specific technique(s) you want to learn there] — the text below is written generically so it can be adapted once you pick a lab.
- Confirm the current eligibility criteria (career stage, EMBO member-state rules, funding cap, visit length) directly on the call page — only "up to three months, another lab, to learn techniques" is verified here.

--- (a) Enquiry email — send once a host lab is identified ---

Subject: Enquiry — EMBO Scientific Exchange Grant, short research visit

Dear [BLANK: host PI name],

My name is Adonai Gil, and I am a research assistant in the Animal Minds lab at the Universitat Autònoma de Barcelona (UAB), led by Alex Taylor. I am writing to ask whether you would be open to hosting a short research visit (up to three months), to be supported by an EMBO Scientific Exchange Grant, so that I could learn [BLANK: specific technique] directly from your group.

In my own work I use hierarchical Bayesian models in R (brms, bayestestR, tidybayes, bayesplot, emmeans) alongside GLM-HMM latent-state analysis to characterise behavioural strategies, and I have trained DeepLabCut models and built a coordinate/optical-distortion post-processing pipeline for tracking data.

If this is of interest, I would be glad to arrange a brief call to discuss whether a visit would be a good fit before I put an application together — I would handle the funding application and paperwork myself.

Best regards,

Adonai Gil

--- (b) Draft application framing text ---

I am a research assistant in the Animal Minds lab at the Universitat Autònoma de Barcelona (UAB, PI: Alex Taylor). My master's thesis, on decision-making in a two-alternative task, combined hierarchical Bayesian models in R (brms, bayestestR, tidybayes, bayesplot, emmeans) with GLM-HMM latent-state analysis to characterise the animal's strategies, validated behaviourally; I also trained several DeepLabCut models and built a post-processing pipeline for coordinate tracking and optical-distortion correction.

[BLANK: state the specific technique/method you want to learn at the host lab, why your current lab cannot provide it, and how it would extend your present analysis pipeline.]

The skills gained during this visit would feed directly back into my ongoing work at UAB and into my plan to pursue a funded PhD from around September next year.

Research

Grant item — research is the call page summary; see eligibility notes.
